# LatinAlive — Technical Workflow for Week 1

**Date:** August 8, 2025

Prepared by: Muskan Arora

## 1. Content & Script Creation (Latin Text)

Goal: Generate historically accurate, beginner-friendly Latin sentences tied to comic visuals.

### **Process:**

- 1. **Prompt-based AI text generation** using *ChatGPT*:
  - o Input: Scene description (e.g., "A Roman girl buys bread in the forum").
  - o Output: Multiple Latin sentence options.
- 2. **Grammar verification** with *Classical Language Toolkit (CLTK)* and *spaCy Latin model*:
  - o Tokenize sentences.
  - o Identify parts of speech, case, tense, and agreement.
  - o Correct errors before finalizing.
- 3. Store verified Latin sentences in a shared *Google Sheet* with English translations for quick reference.

#### **Tools Used:**

- ChatGPT
- CLTK
- spaCy + Latin model
- Stanza (cross-check)
- Google Sheets

## 2. Visual Content Creation (Comic Panels)

Goal: Produce historically accurate, comic-style illustrations that match the Latin script.

#### **Process:**

- 1. Use *DALL-E* with structured prompts including:
  - o Time period (1st century Rome)
  - o Clothing (tunic, toga)
  - o Location (forum, market, villa)
  - o Style (comic illustration, panel-friendly)
- 2. Download and organize generated panels in a folder structure:
  - o /Week1/Panel1.png
  - o /Week1/Panel2.png
- 3. Review for historical accuracy; re-prompt if necessary.

#### **Tools Used:**

• DALL·E

## 3. Morphosyntactic Analysis (Classroom Activity)

Goal: Provide real-time feedback on sentence structure.

### **Process:**

- 1. Teacher or student inputs Latin text into an NLP parser script (Python).
- 2. Parser outputs:
  - o POS tags (noun, verb, adjective)
  - o Case, gender, number for nouns/adjectives
  - o Person, number, tense, mood for verbs
- 3. Display analysis live on a projector or via a web dashboard.

### **Tools Used:**

- Python
- spaCy Latin model
- Stanza
- Jupyter Notebook or Streamlit dashboard

## 4. Storage & Sharing

Goal: Centralized, accessible repository for all materials.

### **Process:**

- 1. Store all weekly content in Google Drive with folders per week.
- 2. Maintain a version-controlled backup in GitHub (optional but highly professional).
- 3. Share links in weekly reports to allow the professor to review materials.

### **Tools Used:**

- Google Drive
- GitHub (optional for scripts & templates)

## 5. Integration Roadmap

Later weeks will integrate:

- **Genially / Kahoot** for gamified quizzes and competitions.
- **Text-to-Speech (TTS)** for audio Latin pronunciation (Google TTS or Azure TTS).
- Portfolio platform Google Sites, Notion, or GitHub Pages for final student work.
